# Jargon Buster

► Not sure what all the terms mean? Here's a short guide to help understand the D-Link products and services discussed in this guide.

## High Definition (HD) video

HD cameras capture a lot more detail and are also able to cover a much wider area than a standard VGA camera, giving good surveillance coverage with fewer cameras.

## Megapixel

A generic term for cameras able to record at high resolution, i.e. above a million pixels. Analogue cameras are limited to around 0.4 Megapixels whereas digital IP cameras can capture images in much higher detail with 2 Megapixels and above.

## Built-in IR

Infrared (IR) illuminators emit invisible light, enabling you to monitor an area in complete darkness.

## Infrared Cut Filter

A filter that can block infrared while still passing visible light. Usually removable (either manually or under software control) to enhance daytime images while also allowing the camera to be used at night.

## Wide Dynamic Range (WDR)

The ability of a camera to capture images in a wide range of lighting conditions. Extremely useful where glare, reflection and high levels of contrast would otherwise result in a poor picture, such as in doorways and next to windows.

## LowLight+

LowLight+ technology captures light even in low lux, allowing the camera to record colour images even in low light conditions.

## P-iris

P-Iris is a precise iris control, that optimises the iris opening of the lens under all lighting conditions resulting in images with better contrast, clarity, resolution and depth of field. It provides improved image sharpness and increased image usability.

## Video Streaming

Encoding of captured video for transmission over a data network. A number of encoding and compression technologies can be applied here, the most popular being Motion JPEG, MPEG-4 and H.264. Of most interest at present is H.264 which can optimise bandwidth and storage by up to 80% without compromising on image quality.

## Onboard SD Recording

The ability to record to media in the camera itself, such as flash memory or removable SD card. Particularly useful for remote sites with no network, Wi-Fi or 3G connectivity and as a backup in case of a network failure.

## Pan, Tilt, Zoom (PTZ)

The ability to remotely control a camera to pan (move from side to side), tilt (move up and down) and zoom in on a particular area of interest.

## Passive Infrared (PIR)

PIR sensors measure infrared (IR) radiation from objects in its field of view. Used to detect movement.

## Power over Ethernet (PoE)

The ability to transmit power to a remote IP camera over the data network. This eliminates the need for an independent main power supply and an AC adapter that might fail or be unplugged. With PoE a central Uninterruptible Power Supply (UPS) will also keep the cameras working in the event of a power cut.

## Digital input/output (DI/DO)

Standard interfaces that enable a camera to communicate with external sensors (e.g. door and window sensors) and alarm systems.

## Network Video Recorder (NVR)

An appliance or application designed to manage and record video streams from IP Surveillance cameras. These will, typically, record to hard disk with optional copying to other media such as recordable DVD and the cloud.

## Open Network Video Interface Forum (ONVIF)

An open industry forum, of which D-Link is a member, for the development of a global standard for interfacing IP-based physical security products.

## JustConnect™

JustConnect™ (DNR-2060-08P) is a new standalone multifunctional network video recorder (NVR), designed to power a complete, end-to-end surveillance solution for small businesses. Supporting up to eight IP Surveillance cameras, it can be set up without the need for a PC and brings comprehensive surveillance capabilities to users of any level of technical knowledge. When connected to the Internet, the DNR-2060-08P supports remote monitoring in real time on a smart phone or tablet with the free JustConnect+ mobile app, so business owners can keep an eye on things from anywhere at any time.

## mydlink™

mydlink is a unique cloud service that allows you to easily set up remote access and alerts from D-Link cloud products, on your smartphone and computer without complicated set up, from anywhere in the world.

mydlink-enabled network cameras offers a simple and easy solution to access your camera from anywhere around the world via the Internet. You can remotely monitor your home or business using a standard web browser or through the free and paid mobile apps available on Apple App Store or Google Play. You can even talk back through the app with 2-way audio support as well as playback recorded video clips from the onboard storage\*. E-mail alerts notifies you whenever motion or sound\* is detected.

\*Available on certain models only. Please check product specification for more information

## DNR-2060-08P JustConnect™ Multifunctional Network Video Recorder

The DNR-2060-08P JustConnect™ Multifunctional Network Video Recorder is a comprehensive standalone network video display, storage, and management solution providing reliable high-quality monitoring for IP-based security systems. The DNR-2060-08P enables simultaneous recording and remote access to recorded videos as well as live view. Controlling the DNR-2060-08P is exceptionally easy using conventional front panel controls, or with an optional keypad and mouse, or remote control handset. The highly flexible, simple-to-configure, and manage make the DNR-2060-08P a cost-effective upgrade addition to your security and surveillance infrastructure.

### Robust Management Software

The standalone DNR-2060-08P includes a complete surveillance software package that enables you to view, manage, store, record, and search through footage from up to eight cameras in a central location, without the need of a computer. Recordings and e-mail alerts can be triggered through motion detection or events triggered by digital input devices, keeping administrators informed of any unusual activity.

### Connectivity

The DNR-2060-08P has eight built-in 802.3at compliant PoE+ ports that simplifies camera installation by providing both power and network connectivity through a simple cable. Not only does this save overall installation cost by eliminating the need to install separate electrical wiring and power outlet, PoE+ allows you to power even the most demanding cameras. In addition, the included digital input and output connector enables further integration to external devices such as switches and alarm relays.
