

In-Ear Headset with Mic and 3-Button Remote

IMAGE S4i

Made for music-loving, multi-tasking iPhone and iPod users, the Image S4i in-ear headset will rock your world and simplify your life. It's a breakthrough product that lets you enjoy superior sound, control your music library, as well as answer and end calls without skipping a beat.

Breakthrough Design

The Image S4i works seamlessly with the iPhone 3GS, third generation iPod shuffle, second generation iPod touch, fourth generation iPod nano and the iPod classic 120GB. The headset features Apple's advanced three-button microphone and remote system that easily handles the voice and/or music control of these Apple products.

Furthermore, the S4i remote is among the first to be fully compatible with the Apple VoiceOver feature on the third generation iPod shuffle, which allows you to hear the name of the playlist, song or artist with just the press of a button.

The S4i positions its in-line microphone and remote at the yoke to create a more natural feel when answering calls and controlling music. Because the microphone is a highly intelligible 360-degree design, you don't have to talk down into it.

Amazing Comfort and Fit

The exclusive oval ear tips naturally fit the contours of your ear canals, providing comfortable long-term wear as well as producing a perfect acoustic seal. A good seal minimizes outside noise, also known as noise isolation, and allows you to enjoy your music at lower, safer volumes.

Premium Sound

The Image S4i employs a moving coil micro-speaker with controlled damping for smooth, full-bodied sound that's similar to a more expensive design. A dual neodymium magnet motor structure, in each of the 8.5 mm drivers, establishes the S4i's damping characteristics.

Added Frills

The Image S4i comes with a two-year warranty and includes four different-sized ear tips, an ear tip cleaning tool, a premium carrying pouch as well as a clothing clip.
