

WE ARE PROUD TO PRESENT:

# TELLDUS BRAND NEW Z-WAVE GATEWAY

## THIS IS Z-WAVE

- **Mesh network**  
the signals jump from one device to another which extends the range significantly.
- **Two-way communication**  
you will always get a confirmation in which status the unit you want to control is.

We have worked extremely hard with our new innovation - our brand new Z-Wave gateway and now we are very excited to present it. This is probably the best Z-Wave gateway developed to date and is completely unique in its kind.

Not only stylish, it is also incredibly competent. It contains both a Z-Wave chip with the latest technology and a 433MHz transmitter. It means that you can still use cheaper technology where you want to and advanced Z-Wave technology where necessary.

Just as with its predecessors, it is compatible with a variety of devices on the market which already exists in many users' home.

Installation is admirably simple and all configuration is done in our web-interface Telldus Live! Here you can set up everything that you want the system to do for you. All schedules and events are also stored locally in the gateway. So should the internet connection disappear, your smart home will be up and running as usual.

We will continue to launch more smart accessory that utilizes Z-Wave technology, which will let you use the gateway to everything you can imagine.

Available for delivery in the beginning of September 2015.

- Z-Wave
- Built-in 433MHz transmitter
- Stores events and schedules locally
- Modern design

### Technical specifications
