SIREN

Z-Wave siren with audible and visual alerts plus back-up battery.

The safety and security features of a Z-Wave automation system get an upgrade with Aeon Labs' Siren. Controlled by Z-Wave, Aeon Labs Siren comes with all the features that a siren ought to have as well as the features it should have. Along with its inbuilt siren and LED lights are a host of inbuilt benefits. There's the backup battery that will keep the siren online in the event of a power-cut, purposeful or otherwise. There are also the inbuilt configuration commands, allowing the decibels the siren outputs to be customised for secondary purposes, from door chimes to door bells. Utilising the latest, stable Z-Wave technology, each sensor acts as a network repeater and features Z-Wave Explorer Frames for network maintenance and healing.
